LIFE INSURANCE

Prepared for:

CLIENT 1

Prepared on: May 22, 2026 - 03:45 PM

Universal life insurance

Genesis universal life insurance is a very flexible financial tool that gives your loved ones financial security based on your personal, family and work situation. Genesis combines two elements of sound financial planning: life insurance coverage and a tax-free savings account.

Life insurance coverage

At death, Genesis life insurance guarantees the payment of a tax-free benefit to your beneficiaries.

Choose Genesis universal life insurance to:

- protect your family's lifestyle in the event of premature death
- cover taxes and final expenses
- leave a larger legacy to your loved ones
- cover your business' financial protection needs
- take advantage of various investment options and the investment bonus for your excess payments.

Savings

One of the features of universal life insurance is that it is possible to pay an extra premium in addition to the regular life insurance premium to help you save money tax-free.

Flexible	Universal life insurance offers flexible premium payments. A minimum premium is required to keep the life insurance in force. If you want, you can pay an extra premium and save for your future needs.
Secure	At death, Genesis life insurance guarantees the payment of a tax-free benefit to your beneficiaries.
Reassuring	Genesis universal life insurance helps you meet your insurance and savings needs. When you pay an extra premium, you gain access to a full range of investment options that meet the needs of all types of investors, from the most prudent to the most aggressive, thus allowing you to diversify your savings, tax-free.

Your insurance policy contains conditions and restrictions. Please read them. They include your rights and obligations as a client and your policy termination right and right of claim, where applicable.

Characteristics of Genesis universal life insurance

Genesis universal life insurance differs from regular permanent life insurance in that it allows you to choose among different components. You therefore have personalized financial protection to cover your specific needs.

Please find below the various components of your universal life insurance from which you must make selections. **Your selections will appear on the “Summary of coverage” page in this document.**

Insurance costs	Insurance costs are fully guaranteed for the life of your policy. You must choose between two types of insurance costs: — Level insurance costs: costs that remain fixed for the life of your policy. — Increasing insurance costs (YRT)*: costs that generally increase each year due to your age.
Death benefit	The death benefit is the amount paid by the insurance company to the beneficiary designated in the policy when the insured dies. You must choose between the following three options: — Increasing insurance coverage (Face amount + funds): This coverage is for people whose insurance needs are stable or increase over the years. Based on the level of savings invested, the death benefit is stable or increases, as the value accumulated in your policy (your investments) is added to the insurance coverage chosen when taking out the policy. — Level insurance coverage (Face amount only): This coverage must be combined with increasing insurance costs (YRT)*. It makes it possible to meet insurance needs that do not change over time. The amount invested in your insurance policy (your investments) helps lower the insurance coverage and, as a result, the cost of your insurance. — Minimizing the cost of insurance coverage (Face amount + funds with wealth maximizer option): This coverage must be combined with increasing insurance costs (YRT)*, and is ideal for corporations and affluent clients who want to maximize their savings. The face amount is adjusted to the minimum level required to maintain the tax-exempt status of the policy and, by doing so, the costs of your insurance coverage are kept as low as possible.
Payment option	The premiums you pay, after taxes are deducted, are used to pay the insurance and administration costs. The remainder, if applicable, is invested in the investment options you choose. You must choose between: — Paying the same premium during your lifetime - or — Customize your premium payments at a frequency predetermined with your advisor. It is important to remember that the shorter the payment period, the higher the premiums. Payment options over 10, 15 or 20 years are also available when you choose level insurance costs.

*Yearly renewable term (YRT) insurance costs

Summary of Coverages

Applicants

CLIENT 1 - Female

Tobacco use: No

Birth Date: June 9, 1977

Insurance Age: 49 years

Province: Quebec

Marginal tax rate: 53.31%

IMPORTANT NOTICE

The information found on this page corresponds to the personal data of the applicants, the insureds, as well as the requested coverages. Since this data is used for underwriting purposes, it is very important to check its accuracy and inform your advisor of any correction to be made.

Death Benefit: Face amount only

Automatic optimization of the face amount (AOFA): Active

Insureds

CLIENT 1 - Female

Tobacco use: No

Birth Date: June 9, 1977

Insurance Age: 49 years

Coverage Type: Individual

Insured Person Coverages	Amount	Monthly premium
Genesis 10 - Universal life, Yearly Renewable Term (YRT)	\$144,121.00	\$125.00
- Duration of premium payment: 41 years		
- Duration of protection: For life		
Total monthly premium		\$125.00

Summary of Coverages

Premiums Details

First-year Monthly Premiums	
Minimum premium	\$50.66
Reference premium	\$125.00
Maximum premium	\$730.25
Selected premium for the first year of projection	\$125.00

Monthly Premium Deposits ¹	Period
1.00 X Reference	From year 1

Note:

(1) You will find the premiums assumed in the illustration in the “Annual Premiums Paid” column of the “Policy Projected Values” section of this illustration.

Summary of Investment Assumptions

Accumulation Fund

Investment Bonus: available at the end of the 1st year, based on eligibility criteria specified in the contract

	Interest Rate (%)	Period	Allocation (%)	
			AII ¹	DDA ²
Diversified (IA)	6.00	For life	100.00	100.00
Portfolio Account	0.25	For life		
First year average return	6.00			

Note:

- (1) Automatic Investment Instructions
- (2) Designated Deduction Account

The returns provided in this illustration are shown on a net basis, after deduction of management fees. Current management fees are available on the Company's website, in the section Economic and Financial Publications. These fees are subject to change. However, there are guaranteed maximum fees defined in the policy (you may contact your advisor for more information).

The assumptions above do not take into account any applicable bonus.

Shuttle Fund

	Interest Rate (%)	Period	Allocation (%)	
			AII ¹	DDA ²
Diversified (IA)	6.00	For life	100.00	100.00
Portfolio Account	0.25	For life		

Note:

- (1) Automatic Investment Instructions
- (2) Designated Deduction Account

According to the parameters used, this illustration does not contain any values in the shuttle fund for the entire duration of the projection.

Market Values Adjustment (MVA)

The surrender values presented in the illustration do not take into account the MVA which may apply.

For more information about the MVA, please contact your advisor.

Interest Rate Sensitivity Test

The values shown are sensitive to the interest rates used. In order to make a comparison with your basic scenario, we suggest two additional scenarios using the following variations in yield assumption:

- Index Accounts: since their returns tend to be more volatile, a +2% (favourable scenario) and a -2% (unfavourable scenario) is used;
- Guaranteed Interest Accounts and portfolio account: since they offer more stable returns than Index Accounts, a +1% (favourable scenario) and a -1% (unfavourable scenario) is used;

Please note that for Guaranteed Interest Accounts, we do not illustrate a lower return than the minimum guaranteed rate.

Sensitivity Test

Year	Age	Basic Scenario			Favourable Scenario			Unfavourable Scenario		
		Annual Premiums Paid	Total Surrender Value	Death Benefit	Annual Premiums Paid	Total Surrender Value	Death Benefit	Annual Premiums Paid	Total Surrender Value	Death Benefit
5	54	1,500.00	835.81	144,121	1,500.00	1,096.88	144,121	1,500.00	586.80	144,121
10	59	1,500.00	8,270.43	144,121	1,500.00	9,593.67	144,121	1,500.00	7,093.02	144,121
16	65	1,500.00	20,542.27	144,121	1,500.00	25,122.57	144,121	1,500.00	16,825.21	144,121
20	69	1,500.00	27,382.58	144,121	1,500.00	36,232.97	144,121	1,500.00	20,671.83	144,121
36	85	1,500.00	48,868.70	144,121	1,500.00	132,632.29	152,089	1,500.00	4,067.71	144,121
51	100	0.00	84,095.03	144,121	0.00	462,809.35	465,306	Lapsed	Lapsed	Lapsed

Note:

Favourable Scenario

- Thanks to the Automatic Optimization of the Face Amount (AOFA), an increase in the face amount is needed in year 36 to maintain the policy's exempt status.
- A transfer to the shuttle fund is required in year 42 to keep the policy tax-exempt. The amounts transferred are taxable.

Unfavourable Scenario

- The policy lapses since the accumulation fund becomes negative during year 37.

Policy Projected Values

51	100	0.00	6.80	84,095	84,095	0	144,121	115

Note:

(1) Extended insurance represents the number of years during which your policy will remain in effect if you stop paying premiums. This duration is not guaranteed and can vary based on several factors, particularly the real returns that your investments obtain.

Premiums are payable in years 1 to 41.

Premiums are deposited at the beginning of each month.

According to the investment assumptions shown, the policy will remain in effect until age 100.

IMPORTANT NOTICE

This illustration is provided for information purposes to facilitate your understanding of the product. The above data must not be considered as a guarantee of the future results, which could be higher or lower depending on the real returns obtained on your investments. If there is any discrepancy, your policy contract prevails.

Death Benefit Summary

This report shows the life insurance death benefit of all insureds covered under your Universal Life policy.
Upon death, all the funds are added to the face amount.

Details of the Death Benefit: CLIENT 1

Illustration Notes

Results

- This illustration is not part of the contract.
- All values appearing in the report tables are calculated at the end of the policy year.
- The product as shown is exempt under the Income Tax Act currently in force. Note that the Act can be changed at any time.

Guarantees

- Even though all efforts are made to ensure the quality of the illustration or its use, the figures used in the illustration, particularly costs and/or premiums, are subject to approval by the Company.
- This illustration is not an insurance contract or an offer of insurance. In case of discrepancy, the insurance contract prevails.
- This illustration report is not designed to provide professional or legal advice.
- Please note that the applicant may cancel the coverage shown at any time.

Glossary of general insurance terminology

Accumulation fund:

The accumulation fund consists of a portfolio account and investment accounts selected by the client. It receives the premiums paid up to the maximum amount allowed for tax exemption purposes.

Adjusted cost basis (ACB):

The ACB is used to calculate the taxable gain following a withdrawal, a transfer to the shuttle fund or a policy loan. It is equal to the sum of premiums paid into the contract adjusted for withdrawals minus the accumulated net cost of pure insurance (NCPI).

Automatic optimization of the face amount:

This option automatically increases the face amount to create additional tax room and minimize transfers to the shuttle fund. Specific costs of insurance apply to these face amount increases.

Costs:

At issue, the level and YRT costs of insurance are guaranteed for life. Once issued, all additions made to the coverages will require new evidence of insurability and will be calculated based on the insurance costs in effect at that time.

Duration of the Illustration:

This illustration presents values until the principal insured reaches the age of 100, but this does not mean that the policy terminates at that time. In reality, the policy will remain in force until the death of the last insured as long as the premiums are paid and the funds are sufficient.

Extended insurance:

Extended insurance represents the number of years during which your policy will remain in effect if you stop paying premiums. This duration is not guaranteed and can vary based on several factors, particularly the real returns that your investments obtain.

Face Amount only:

Means that the death benefit is paid on the higher of these two amounts: face amount plus shuttle fund or total funds.

Investment bonus:

Beginning on the 1st policy anniversary, an investment bonus of 0.75% is credited on all index accounts available in Genesis, excluding the Money Market account.

Maximum premium:

Means the maximum premium amount that can be paid into your policy in a given year to ensure you do not exceed the maximum amount allowed for tax exemption purposes on subsequent policy anniversaries. This amount is indicative and varies depending on the actual performance of the accumulation fund.

Portfolio account:

Receives amounts paid into the contract. Insurance costs are withdrawn from this account each month. Excess amounts may then be transferred to the different investment accounts according to the automatic investment instructions (AII).

Premiums paid:

Premiums paid include the premiums received on a regular basis and additional deposits. They may be subject to a premium tax and/or an administration fee. The tax can vary based on changes made to the premium tax rate in the province of residence. It is not mandatory to pay a premium provided there are sufficient funds in the policy to keep the policy in force.

Shuttle fund (see Taxation):

Receives the amounts that exceed the maximum premium allowed for tax exemption purposes. Amounts in the shuttle fund are transferred to the accumulation fund as soon as possible. The term "before tax" means that tax payable on gains in the shuttle account must be paid separately, with money that does not come from the account.

Glossary of general insurance terminology

Taxation:

The amounts are accumulated in the accumulation fund up to the maximum amount allowed under the Income Tax Act to maintain the contract's tax-exempt status. When accumulated amounts exceed this maximum, a transfer is made to the shuttle fund. The earnings generated in this account are taxable annually. In addition, a portion of the withdrawals, policy loans and surrender values could be subject to the Income Tax Act.

Total Funds:

The total funds represent the total amount invested in the policy's various accounts and the shuttle fund. The total funds must be sufficient to maintain your policy in force. The amount accumulated in the "Total Funds" column will be payable before the 5th coverage anniversary only if the insured was insurable at issue of the coverage.

Total surrender value:

The total surrender value is the amount paid upon total surrender of the policy. Among other things, it includes the shuttle fund and also takes into account the policy loans and surrender fees, if applicable.

Weighted average yield:

Corresponds to the average interest rate realized on the different investment accounts. The interest rates presented in this illustration are on a net basis, meaning net of management fees.

Signature and Declaration

Even though all efforts are made to ensure the quality of the illustration or its use, the figures used in the illustration, particularly costs and/or premiums, are subject to approval by iA Financial Group.

I, the undersigned, declare that I received a copy of the illustration report, that I have read it, and by signing below, I confirm that I understand the following:

- This illustration is not an insurance contract or an offer of insurance. In case of discrepancy, the insurance contract prevails.
- I can change the amount and the number of premiums payments; however, I must maintain an amount sufficient to cover the costs of insurance to keep the contract in force. The costs of insurance for a contract with levelled costs are fixed for the life of the contract. The costs of insurance for a contract with YRT costs generally increase each year.
- The returns presented in the illustration are on a net basis, meaning fees are deducted.
- Real returns will vary upward or downward compared to projected returns and the difference in these returns will affect:
 - The total face amount, the surrender value and the value of the accumulation fund;
 - The amount and number of premium payments required to keep the contract in force.
- For YRT costs of insurance coverage, surrender charges apply in the following situations: partial withdrawal, face amount reduction, and surrender when requested before the 15th anniversary of this coverage. Information regarding surrender charges is included in the contract.
- The projections are based on existing legislation. Consequently, tax rates and taxes may change over time.
